History of Thought: Four Dimensional Geometry Writers in the eighteenth century began to discuss the possibility of representing mechanics as a geometry of four dimensions, considering time to be the fourth dimension. Lagrange (1736-1813) published this idea in 1797 in his *Theorie des fonctions analytiques* , but it was previously expressed by d'Alembert (1717-1783) in an article on "Dimension", published in 1754 in the *Encyclopedie* edited by Diderot and himself.
